The Prospecting 1000+

PHILOJAIN MUSIC MUSE | AMIT JAIN | 8 OCTOBER 2026

2,817 discovery and pitching leads across the site's 84 music-guide categories.

2,320 artist-name leads from Bandcamp release credits, plus 497 routes consolidated from the owner-supplied 500-entry pitching list.

Use this as a screening directory. An artist appearance is not proof of an unsigned act, a recent debut or willingness to join a label. An inherited organization entry is not proof that the destination is active or accepting submissions.

Three uses

Discover talent: follow a release, confirm the artist identity and recent activity, then review musical fit. Pitch releases: check the organization's official website, current artists and submission instructions. Explore communities and media: research their audience and recent coverage before choosing an approach.

Source labels and counts

Artist display names are pooled across release appearances; multiple tags count once in the total. Similar names require identity review. Original organization ranks are kept in the CSV as provenance, not adopted as a new ranking. Some destinations and artists recur in several genre filters.

Bandcamp discovery tags provide listening context, not certified genre classification. Retrieval covered 77 guide-tag pages; 72 contained extracted artist leads. Empty categories remain available for further research.

The web directory and CSV preserve original names and full evidence. This PDF uses a source-link placeholder when the installed font cannot render a display name. No outreach has been sent.

Live directory: label.postprogmetal.rocks/prospecting/

Genre and subgenre coverage

Per-category counts overlap; they must not be summed as unique prospects.
